

500W FAN COOLED | 180W CONVECTION COOLED

AC-DC POWER SUPPLIES

The GSP500 has been designed to offer a full 500W of output power in a very small mechanical footprint, whilst still providing peak power to 650W, a 5V standby output with 2A of current capability and an input standby power draw of <1W when the inhibit is activated.

Approved for both IT and medical applications the series has output versions from 12V to 48V and can be supplied as a U channel for system cooling or with optional very quiet integral fans (-EF). These fans are intelligently controlled to provide the most optimised acoustic noise in the system and further more the GSP500 can provide up to 180W without forced cooling, thus allowing fans to be switched off during periods of lower system loading.

Features

- Convection/forced-cooled ratings
- Universal 80-264VAC input
- IT and medical safety approvals
- <1W standby power
- -40°C to +70°C operation
- Remote on/off
- 5V/2A standby output
- 3 year warranty

Dimensions

GSP500:

6.00 x 4.00 x 1.65" (152.4 x 101.6 x 41.9 mm)

GSP500-EF:

6.71 x 4.00 x 1.65" (170.4 x 101.6 x 41.9 mm)

Models & Ratings

Model Number ^(1,3)	Output Voltage V1	Output Current V1		V Standby Output		Fan Supply	Max Output Power	
		Convection	Forced	Convection	Forced		Nom	Peak ⁽²⁾
GSP500PS12-EF	12.0VDC	15.00A	42.0A	5V/1A	5V/2A	12V/0.3A	500W	650W
GSP500PS24-EF	24.0VDC	7.50A	21.0A	5V/1A	5V/2A	12V/0.3A	500W	650W
GSP500PS48-EF	48.0VDC	3.75A	10.5A	5V/1A	5V/2A	12V/0.3A	500W	650W

Notes:

1. Remove suffix -EF (EndFan) for use with integral system cooling.
2. Peak power available for 100 ms maximum with a 10% duty cycle. The average power in a period should be equal or less than the normal power.
3. For optional current share version, add suffix 'P', e.g. GSP500PS24P or GSP500PS24P-EF.

Summary

Characteristic	Minimum	Typical	Maximum	Units	Notes & Conditions
Input Voltage - Operating	80	115/230	264	VAC	Derate output power <90VAC. See fig 1
No Load Input Power			0.5	W	All models, when inhibit activated
		3.0			GSP500PS12 - 115VAC
		1.3			GSP500PS12 - 230VAC
		3.0			GSP500PS24 - 115VAC
		1.2			GSP500PS24 - 230VAC
		4.8			GSP500PS48 - 115VAC
		2.3			GSP500PS48 - 230VAC
Efficiency		90		%	230VAC Full load, see fig. 3-5
Operating Temperature	-20		+70	°C	Start up at -40°C. See derating curve, fig. 8
EMC	EN55011/32 Level B Conducted & Class A and B Radiated				
Safety Approvals	IEC60950-1, IEC62368-1, IEC60601-1 Including Risk Management, UL62368-1, CSA62368-1 via cUL, ANSI/AAMI ES60601-1 & CSA C22.2, No.60601-1, EN62368-1, EN60601-1, LVD & RoHS, Equipment Protection Class I				
Weight		1.87 (0.85)		lb (kg)	GSP500PSxx models
		1.98 (0.9)			GSP500PSxx-EF models

Input

Characteristic	Minimum	Typical	Maximum	Units	Notes & Conditions
Input Voltage - Operating	80	115/230	264	VAC	Derate output power <90VAC. See fig 1
Input Voltage - Fault Condition			300	VAC	5 second max

Signals & Controls

Characteristic	Notes & Conditions
Power Fail (PF)	Open collector referenced to negative sense, transistor normally on when power is good (see fig. 5); power is considered good when PFC bulk capacitor voltage is normal. PF: Provides ≥ 5 ms warning of loss of output from power failure.
Inhibit	Uncommitted isolated optocoupler diode, powered diode inhibits both V1 and fan supply (see fig. 6). During inhibit the standby supply and current should be limited to 1A for thermal reasons.
Output Good	LED Indicator
Fan Speed Control GSP500PSxx-EF Models	The fan speed is set to one of 4 states (high, mid, low or off) dependant on the internal power supply ambient temperature, input voltage and output load at any given time.
Standby Supply	5V/2A Isolated supply present when AC applied.
Remote Sense	Compensates for 0.5V total voltage drop.
Current Share	Optional, on 'P' version only. Connecting pins 5 or 6 on one unit to pins 5 or 6 on another like voltage unit will force the current to be shared within 10% between the two outputs. Up to three units can share current. (see fig. 7)

3. Fan connector mates with JST housing PHR-3 and SPH-002T-P0.5S crimp terminals or equivalent. Logic connector J301 mates with JST housing

PHDR-10VS and SPHD-001T-P0.5 crimp terminals.

Thermal Considerations

In order to ensure safe operation of the PSU in the end-use equipment, the temperature of the components listed in the table below must not be exceeded. Temperature should be monitored using K type thermocouples placed on the hottest part of the component (out of direct air flow). See below for component locations.

Temperature Measurements (at Maximum Ambient)	
Component	Max. Temperature °C
T1 Coil	120°C
L3 Coil	120°C
Q7 Body	120°C
Q102 Body	120°C
C20	105°C
C102	105°C

Service Life

The estimated service life of the GSP500PSxx Series is determined by the cooling arrangements and load conditions experienced in the end application. Due to the uncertain nature of the end application this estimated service life is based on the actual measured temperature of a key capacitors with in the product when installed by the end application. The worst case of the two figures should be taken as the indicative service life in 24/7 operation.

The graph below expresses the estimated lifetime of a given component temperature and assumes continuous operation at this temperature.

Estimated Service Life vs Component Temperature
